Meet the A-REX
Made alive by the creators of NorduGrid ARC

The mightiest computing element ever!
Eats everything!

Climbs the highest mountains.
Reaches the clouds.
Plays nicely with others.

It'll catch you eventually, better try it today!

The A-REX is the ARC Resource-coupled EXecution service. It’s easy to install, runs on every major Linux flavor, OS X, and even on Windows to some extent. It’s non-intrusive, has a small footprint, quickly and painlessly turns your cluster to a standard-compliant computing element.
